ADRIAN DUMITRU

BACKEND SOFTWARE ENGINEER

Backend engineer with 6+ years of experience building Java microservices and event-driven systems. Currently embedded at Swisscom through adesso, where I develop an SNMP-based network discovery service with Spring Boot, write solution designs and carry out production deployments. Solid background in Kafka, Kubernetes and cloud (AWS, Azure).

SKILLS

LANGUAGES
Java, C#, Python, TypeScript, Rust (WASM), Bash

FRAMEWORKS
Spring Boot, Quarkus, .NET / ASP.NET, Angular

MESSAGING
Apache Kafka, Confluent Schema Registry (Avro), event-driven architecture

NETWORKING
SNMP, network device discovery

CLOUD & DEVOPS
Kubernetes, Docker, Envoy, Spinnaker, AWS (Lambda, S3, IAM, STS, Secrets Manager, DynamoDB, Cognito, CloudWatch), Azure

DATABASES
PostgreSQL, Oracle, HBase, DynamoDB, InfluxDB

PRACTICES
Solution design, microservice architecture, production releases, reverse engineering of legacy code

EDUCATION

2018 – 2020 · Turin, Italy
Higher Technician in Software System Development
Fondazione ITS ICT Piemonte (post-secondary, EQF 5)

2013 – 2018 · Moncalieri, Italy
Diploma in Computer Science
ITIS Pininfarina

EXPERIENCE

Professional System Engineer
Oct 2023 – Present

adesso Schweiz AG · Lugano · embedded full-time at Swisscom

- Designed and developed an **SNMP-based network discovery** service in Java / Spring Boot that automatically detects and inventories network devices.
- Authored **solution designs** for new components and features, from requirements analysis to the technical proposal agreed with the client.
- Carried out **manual production deployments** of the services I work on, taking releases from test environments to production.
- Integrated services with **Kafka** and maintained workloads running on Kubernetes.
- Analysed and evolved a legacy Java 8 codebase; customised VMware-based products; automated operational tasks with Bash scripts.

Stack: Java, Spring Boot, SNMP, Kafka, Kubernetes, VMware, Bash

Solution Developer
Aug 2020 – Oct 2022

Engineering Ingegneria Informatica · Turin · Energy & Utilities

- Built a **Kafka event sidecar** for an enterprise platform processing **millions of events**.
- Created **reusable microservice templates** adopted by **hundreds of developers** across the platform.
- Developed microservices in Spring Boot, Quarkus and .NET that resolve credentials from AWS and Azure secret stores and connect to HBase, PostgreSQL, DynamoDB and InfluxDB.
- Built event-management and auditing microservices in an event-driven architecture (Quarkus, Kafka, Avro / Schema Registry).
- Developed an **Envoy proxy WASM filter in Rust**; evaluated canary deployments with Spinnaker.
- Deployed microservices to Kubernetes and provided technical support to other development teams.

Stack: Java, Spring Boot, Quarkus, C#/.NET, Rust, Kafka, Kubernetes, AWS, Azure

EXPERIENCE (CONT.)

Software Engineer (Contractor)
Jul 2023 – Sep 2023

Altilia · Turin · Enterprise software

- Reverse-engineered and debugged Spring Boot services to locate and fix production issues.

Java Developer (Contractor)
Jan 2023 – Jun 2023

Horsa · Turin · Enterprise software

- Recovered an undocumented legacy system with no version control by **reconstructing the source code from the production JAR**.
- Delivered a full **cross-vendor database migration (MySQL ↔ Oracle)** through reverse engineering of the data model and business rules.
- Analysed and fixed bugs in Spring applications backed by Oracle DB; containerised services with Docker.

Software Engineer (Contractor)
Oct 2022 – Apr 2023

Prometeia · Turin · Wealth management & financial distribution

- Built AWS Lambda functions in Python (S3, Cognito, CloudWatch).
- Implemented features in Spring Boot back-ends and Angular 11 front-ends.

Internships
2017 – 2020

Engineering (Feb–Jun 2020) · Oozone (Feb–Jul 2017) · Turin

- Built a back-office application in Angular 8 / TypeScript (Engineering).
- Built a demo e-commerce site in HTML, CSS, JavaScript and PHP (Oozone).

PERSONAL PROJECTS

Opex · Co-founder

Financial management platform for freelancers: open banking via Salt Edge (PSD2), invoicing, cash-flow and quarterly VAT forecasting.

- Designed the back-end architecture with Spring Boot, Keycloak and PostgreSQL.
- Implemented compliance features: TOTP strong customer authentication, AES-256-GCM encryption of sensitive data, GDPR consent tracking and audit logging.

Java · Spring Boot · Keycloak · PostgreSQL · PSD2 · GDPR

github.com/Adryd99/Opex-main

Game development

Game prototypes in Unreal Engine and Unity, plus classic remakes (Snake, Tetris, a Flappy Bird variant) in Java and C#.

Unreal Engine · Unity · C# · Java
